

H₂O

Drinking bowls and drinking towers for all pigs - from 7 kg to SOWS

The H₂O line of drinking bowls from Domino covers any need for drinking bowls, from piglets to sows. All drinking bowls are made of strong stainless steel. The H₂O drinking bowls represent a hygienic and water-conserving solution.

Piglets are easily accustomed to the drinking bowl because the nipple is placed in the middle close to the bottom of the bowl.

The bowl is supplied complete with nipple and connection pipe featuring a ½" inside thread for further piping.

It is also possible to have the drinking bowls mounted on a tower. There are 6 drinking bowls on each tower. The tower is to be placed in the middle of the pen. It is a great advantage that water shall only be connected to one pipe that has been mounted in the middle of the drinking tower.

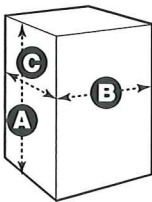

The tower is available in 3 versions – one for piglets, one for porkers and one for sows.

The drinking tower is supplied complete with nipples and connection pipe featuring a ½" inside thread for further piping.

The Domino H₂O drinking bowls and drinking towers are also noted for the following:

- Strong materials, stainless steel
- No sharp edges, hygienic and easy to clean
- Supplied fully assembled and ready for installation
- Adjustable nipple and filter
