

Mini Kvik / Starter

FEEDING OF PIGLETS

Mini is a product ensuring that piglets are quickly and efficiently accustomed to dry feed. This feeder ensures easy access to the feed for all piglets, also the weak ones of the heard. The adjustable front plate ensures the optimal amount of feed, and the waste is reduced to a minimum. By means of a simple locking device the feeder is fixed without any use of tools, and it can be placed in the farrowing pen when required.

Kvik is the optimal learning plate for piglets from the first week.

The Domino **Starter** trough is made in 2 versions – in black PE plastics and in stainless steel. The plastic version has got a larger bottom area and is very suitable for dry feed. The stainless steel version has got a smaller bottom area which contributes to a quicker distribution of the feed in the trough. This is important by small amounts of liquid feed.

Starter troughs can be fastened directly on the split floor without any use of tools, with a spring hook. The separation prevents the pigs from staying in the trough. These products secure equal access to the feed, also for the weakest piglets.

The above-mentioned products are also noted for the following:

- Strong materials, PE plastics and stainless steel
- No sharp edges that can harm the animals
- Easy to clean – do not need to be separated before cleaning
- Delivered fully assembled – ready to use
