

Feeding troughs for calves

The Domino plastic troughs for calves are made of a strong 12 mm plastic plate and provided with galvanized channel sections on the edges for protection and stabilisation.

Available in two variants with different edge heights. The high front and back edges of the troughs ensure minimum feed waste. Length upon request up to 3000 mm.

A practical tilting fitting made of very strong materials keeps the trough in place and ensures easy cleaning.

The Domino plastic troughs are also noted for the following:

Strong materials, PE plastics and galvanized steel

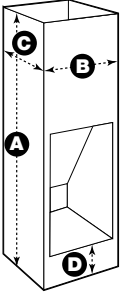

Steel section reinforced edges

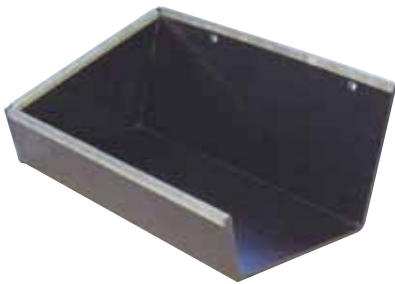

No sharp edges that can harm the animals

Easy to clean - disassembling before cleaning not required

Good hygiene
